

## Explaining Local Fields to a Computer

Filippo A. E. Nuccio Mortarino Majno di Capriglio

*Université Saint-Étienne*

In this talk I will briefly present what a proof assistant is, namely a piece of software that can be used to digitalise mathematical *arguments*, rather than numerical computations or algebraic manipulations. I will then discuss a recent work, in collaboration with M. I. de Frutos Fernández, where we formalise the basics of the theory of local fields and of their extensions.
